

STANDARD NOCLAF

Noclaf is a furniture manufacturer who uses innovative technologies and original solutions, to meet customers' individual needs while maintaining the maximum high quality standards. Below is a list of guarantors that make up the Standard Noclaf.

Individual Product Number is assigned to all furniture manufactured by Noclaf company. For you it's a authentication. This number lets us determine the type of the furniture, decor, order number and the date of implementation. Thanks to this the future cooperation is much easier. Individual Product Number is located:

- on the label affixed to the cardboard box, in which the ordered furniture is packed
- under the cap with Noclaf logo inside of the cupboards

Moisture resistant furniture

All the furniture manufactured at Noclaf is moisture-resistant. This is possible thanks to carefully selected components, the latest technology used during production and performance precision. The combination of these three features ensures maximum durability in harsh conditions of high humidity. It also allows to produce specialized furniture used in professional areas.

Silent Closing System

Silent Closing System makes the use of cupboard/drawer easier through self-slowng of the element and quiet closing. Thanks to this the aggressive contact of two cupboard elements is eliminated, as this was often associated with the quicker wear of furniture at the place of contact. Using the above system increases safety and comfort of handling the furniture. .

Safety Lock hangers

The hanging cupboards are equipped with Safety Lock hangers; the lock prevents from accidental drop of the cupboard. The hangers are mounted at the back of the cupboards and inside they are aesthetically hidden. The hangers have easy and smooth adjustment allowing for levelling each piece of furniture equally.

Easy mounting

To each product Noclaf included an installation template with instructions. Mounting template is printed in 1:1 scale, so that you have the proper placement of mounting holes given with the accuracy of one millimeter. It's really easy!

Box drawers

drawers can be matched in 4 different colours: birch, anthracite, white and grey. The board used for the insides of the drawers has a thickness of 16mm. In the sink cupboards high backs of the drawers ensure the cover of hydraulic installation.

Organizers

For each drawer we offer 4 types of organizers that can be fitted. Organizers ensure keeping the drawers tidy and are made of 10mm board. Their edges can be customized with the choice of 4 different colors, matched to the inside of a drawer.

Full cupboard backsides

The backsides of the cupboards are made of the same board as the whole body. Thanks to this the cupboards are more stable and each element, including the back, is adapted to the conditions in the bathroom. At the client's request, this solution can also be incorporated in case of the sink cupboard (with the indication of the pipe hole).
